

Claims:

1. Laminated or extruded flat flexible cable, also called electrical flat conductors, characterized by the fact that the widths of the conductor tracks (2, 2', 2'') are staggered in an arithmetic sequence and that the spacings (4) between adjacent conductor tracks are preferably of the same size or also staggered in an arithmetic sequence.

2. Flat flexible cable according to Claim 1, characterized by the fact that contacting of the conductor tracks (2, 2', 2'') occurs independently of their width by means of connectors, for example, strip terminals, whose contacts are provided equidistant from each other at a spacing equal to the width of the narrowest conductor track multiplied by the base spacing between the conductor tracks.

3. Flat flexible cable according to Claim 1 or 2, characterized by the fact that the width of the conductor tracks is a whole number multiple of 2.54 mm and that the spacing between adjacent conductor tracks is 1 mm or 1 mm plus a whole number multiple of 2.54 mm.
